

2. Avionics Team Structure (Divided into 3 Parts)

A. Flight Hardware

Lead : Rayhanul Nayeem

- **Focus:** Designing and building the physical electronics that go inside the rocket.
 - **Key Responsibilities:**
 - PCB design and fabrication (e.g., custom flight computers)
 - Power management (battery systems, regulators)
 - Sensor integration (altimeters, IMUs, GPS)
 - Wiring and connectors (internal harnesses)
-

B. Software & Firmware

Lead : Faisal Taisir

- **Focus:** Writing the embedded code that runs on the avionics boards.
 - **Key Responsibilities:**
 - Real-time flight control software (data acquisition, decision-making)
 - Firmware for sensor polling, data logging, and telemetry transmission
 - Ejection logic (e.g., triggering recovery systems)
 - Handling flight mode transitions (e.g., boost, coast, descent)
-

C. Telemetry & Ground Systems

Lead: Misbah khan

- **Focus:** Communication between the rocket and the ground during flight.
- **Key Responsibilities:**
 - RF telemetry (LoRa, XBee, or custom RF systems)
 - Ground Station UI/software for live data monitoring

- Post-flight data retrieval and visualization
- Antenna setup, radio licensing, interference testing
